

SILVER ANCIENT REMEDIES

Colloidal silver has been valued throughout history for its antimicrobial properties, from ancient civilizations like the Phoenicians, Greeks, and Romans who used silver vessels to keep water fresh, to the Middle Ages where it was employed in wound care. Its medical use expanded in the 19th and early 20th centuries for treating infections, eye conditions, and as a general antiseptic before antibiotics became prevalent. In modern times, silver ions are still used in medical devices to prevent bacterial growth, and in alternative medicine for immune support, skin conditions, and wound healing.

Silver has also found applications in water purification, both in the past and presently, aiding in the prevention of waterborne diseases. Cultural and religious uses of silver underscore its symbolic value for purity and protection. Current research continues to explore silver nanoparticles for potential new applications, particularly in combating antibiotic-resistant bacteria, reflecting a long-standing appreciation for this natural element's health benefits.

OLDWAYON

Mountain Home, AR
870-562-7784

At Oldwayon, we pride ourselves on producing high-quality colloidal silver using advanced laboratory-grade equipment, ensuring precision and consistency in every batch. We start with the purest 99.99% silver, meticulously cleaning the silver electrodes before use to avoid any impurities. Our process involves using the purest water available, specifically ultra-pure deionized or distilled water, to minimize any chance of chemical reactions that could compromise the quality of the silver. We employ a controlled electrolysis method using high-frequency AC signals with a DC offset, ensuring the silver particles are uniformly dispersed without aggregation. Our state-of-the-art equipment is designed to monitor and modulate electrical signals between the electrodes, allowing us to produce colloidal silver with particles sized for optimal efficacy and stability, all while maintaining strict quality control measures throughout the production process.

COLLOIDAL SILVER MINERAL SUPPLEMENT

ELIMINATE PATHOGENS
VIRUSES AND BACTERIA

WOUND HEALING

MOUTH WASH

DISEASE PREVENTION

PARASITES

FLU / COVID / HIV

CANCER & MORE!

DANGERS OF SILVER USE?

No cases of Argyria have ever been linked to properly produced ionic or colloidal silver solutions.

"Big Pharma" suppresses colloidal silver's benefits due to its successful historical use and inability to be patented. Pharmaceutical companies exaggerate risks like argyria to keep this natural remedy from mainstream use, driven by profit motives.

WHAT REALLY HAPPENED TO "THE BLUE MAN?"

Silver suppressors love bringing up Paul Karason aka Blue Man. He suffered from Argyria and the media likes to connect true colloidal silver with his case. Paul Karason made the mistake of adding common table salt (sodium chloride) to his distilled water as a catalyst to speed the production time of his homemade silver solutions.

Paul was unaware that salt or other additives should never be incorporated into the "electrolysis" process when creating a proper silver solution.

While adding salt reduced Paul's production time, it actually created a completely different silver compound called silver chloride. This compound has been shown to cause a skin discoloration condition called "Argyria." Silver chloride is by no means pure ionic or colloidal silver.

COLLOIDAL SILVER - 20 PPM

(YELLOW)

USES: ORAL, NASAL, LUNGS,
RECTALLY, VAGINALLY

Topically - Dosage is not a concern for the eyes, ears, and when dressing wounds, cuts, scrapes, abrasions, etc.

Orally - For adults / large pets, we recommend a daily oral maintenance dose of 1 tablespoon of 20 PPM solution on an empty stomach. Children or infants/ small pets, on the other hand, should take 1 teaspoon of 20 PPM on an empty stomach.

Nebulizing - 24-48 inhalations per session every 1-3 days. Nebulizing is the most effective method to deliver silver into the bloodstream as it bypasses the harsh stomach environment. Can use ionic or colloidal silvers.

Nasal - 2-4 sprays per nostril every 1-3 days. Can use ionic or colloidal silvers.

IONIC SILVER - 10 PPM

(CLEAR)

USES: EYES, EARS, LUNGS, TOPICALLY

Storage - Store in a dark environment away from prolonged exposure to UV rays. Do not place your mouth on the bottle, dropper, etc. to avoid contamination.

Cold - Solutions should not be frozen or refrigerated.

Use By Date - Solutions should last at least a year if properly stored and cared for.

Color Check - Ionic solutions should be clear, Colloidal solutions should be yellow. If the fluids are any other color, discard and do not use. The solutions should never be cloudy.

Production - We only use pure distilled water and laboratory grade silver and equipment

IN ACCORDANCE WITH THE FEDERAL LAWS GOVERNING "DIETARY SUPPLEMENTS", WE ARE ONLY ABLE TO OFFER GENERAL SUGGESTIONS REGARDING THE ADMINISTRATION OF THE SILVER SOLUTIONS PRODUCED.
